# Better Quality

Ludman Industries is a global manufacturer of Compactors, Briquetters, Granulators and Flaking & Shredding Mills. We are your preferred partner with a fully integrated, state-of-the-art manufacturing plant offering in-depth experience from testing, design and production through distribution to customer support. With over 40 years of experience and over 200 machines operating worldwide, we are world leaders solving your agglomeration & crushing problems.

# Our Services

- Manufacture
- Rebuild / Upgrade
- Repair
- Replacement Parts
- Technical Support
- Field Service
- Lab Testing
- Engineering / Design
- Quality Control / R&D
- Packaging
- Training

# Better Technology

## Compactors

Ludman Industries Roll Compactor is designed to give you a low cost, mechanical means to upgrade or convert undesirable fines by agglomeration into a salable granular product. Compactors are also used for the agglomeration of fines into flakes for pyroprocessing.

### What makes Ludman Roll Compactors the best?

Exceptional rugged designs minimize downtime and maintenance costs.

# Better Design

## Granulators

The Roll Crusher or Granulator processes a variety of materials. It can granulate, grind, pulverize, crack, crumble, or fracture an unlimited number of materials, chemicals, minerals, and plastics. The differential speed of smooth or corrugated rolls permits the production of a narrow range of particle sizes with a minimum of objectionable oversize and undersize particles.

# Better Support

## Flaking & Shredding Mills

We produce a modern line of heavy-duty flaking mills designed to insure maximum efficiency with minimum maintenance based upon proven design. The flaking mill application incorporates high bearing loads and feed capacity.

## Briquetters

Our proven designs and robust construction tailored to our customers needs provide a dependable source for a variety of briquette shapes and sizes. Force-feed type, variable speed feeders provide a means of metering, de-aerating and pre-compacting material as it is fed into the nip zone. Adjustable roll force, variable roll speed can be maintained during full load operation. Roll adjustments allow for precise orientation of briquette cavities.

# The Ludman Difference is Robust Construction

Forging Innovation. Building Quality.
